

## Karnataka Engineering Enterprises moves from Siemens Teamcenter to PTC Windchill to Enhance Product Development Process & Collaboration

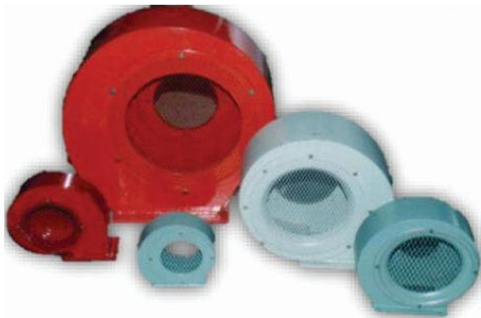

### Karnataka Engineering Enterprises

Karnataka Engineering Enterprises was established in 1972 and is a leading supplier of heat exchangers and blowers for the electrical industry in India. Karnataka Engineering, along with their sister concerns, has established a reputation of excellence in quality among the reputable generator and electrical motor manufacturers in India as well as overseas.

With over 40 years experience in design and manufacturing of heat exchangers, one word describes how their customers see them - CONFIDENCE  
Confidence in the equipment and services they provide.  
Confidence in the promises they make.  
Confidence in the relationships they build.  
Confidence in the knowledge that they always get the job done.

### RESULTS

#### Reduced Cost of maintaining PLM

Windchill offers Change and Project Management with Base Module compared to other PLM. Role based license is also great help to optimize cost. Managing and maintaining PLM on premises was becoming expensive. So KEE shifted Windchill server to cloud which helped in bringing down the cost of ownership, and enabled better collaboration and innovation.

#### Hardware Support

Investment in Hardware for Windchill is economical, & requires minimal configurations to work in Windchill.

#### Training & Support

Excellent support from PTC & DesignTech team with strong expertise and they are easily accessible for Support and Training

#### Leverage new functionalities of PLM

Downstream collaboration is enhanced by using new functionalities e.g Augmented Reality and Navigate tools.

“Replacing Teamcenter with Windchill has helped us to reduce overall cost of maintaining PLM and leverage new Windchill technologies to enhance our Product Development Process...”
